

Day 3 Notes – Student Profile Management Module

Project: Asquare CareerBridge

Objective

The goal of Day 3 is to build the Student Profile Management System.

After registration and login, each student should be able to:

- Create a professional profile
- Update profile information
- Add skills and job preferences
- Add social links
- View profile details

This profile will become the central database used by the Placement Team.

Why Student Profiles?

In most institutes, student information is scattered across:

- Excel Sheets
- Google Forms
- WhatsApp Messages
- Resume PDFs

CareerBridge will maintain a centralized professional profile for every student.

Student Profile Fields

Personal Information

Full Name
Phone Number
Location
Profile Photo

Education Details

Qualification
College Name
Passout Year
CGPA

Technical Information

Skills
Certifications
Projects

Career Preferences

Preferred Job Role
Preferred Location

Examples:

Python Developer
Django Developer
Full Stack Developer
Frontend Developer
Data Analyst

Professional Links

GitHub
LinkedIn
Portfolio Website

Step 1: Create Student Profile Model

Open:

```
placements/models.py
```

Add:

```
from django.db import models
from django.contrib.auth.models import User

class StudentProfile(models.Model):

    user = models.OneToOneField(
        User,
        on_delete=models.CASCADE
    )

    phone = models.CharField(max_length=20)

    location = models.CharField(max_length=100)

    qualification = models.CharField(max_length=100)

    college = models.CharField(max_length=200)

    passout_year = models.IntegerField()

    skills = models.TextField()

    preferred_job_role = models.CharField(
        max_length=100
    )

    github = models.URLField(blank=True)

    linkedin = models.URLField(blank=True)

    portfolio = models.URLField(blank=True)

    def __str__(self):
        return self.user.username
```

Step 2: Create Migration

Run:

```
python manage.py makemigrations
```

Then:

```
python manage.py migrate
```

Step 3: Register Model in Admin

Open:

```
placements/admin.py
```

Add:

```
from django.contrib import admin
from .models import StudentProfile

admin.site.register(StudentProfile)
```

Now profiles can be viewed in Django Admin.

Step 4: Create Profile Form

Create:

```
placements/forms.py
```

Add:

```
from django import forms
from .models import StudentProfile
```

```
class StudentProfileForm(forms.ModelForm):

    class Meta:

        model = StudentProfile

        exclude = ['user']
```

Step 5: Create Profile View

Open:

```
placements/views.py
```

Add:

```
from django.shortcuts import render
from django.shortcuts import redirect

from django.contrib.auth.decorators import login_required

from .forms import StudentProfileForm
from .models import StudentProfile

@login_required
def create_profile(request):

    if request.method == 'POST':

        form = StudentProfileForm(
            request.POST
        )

        if form.is_valid():

            profile = form.save(
                commit=False
            )

            profile.user = request.user
```

```
        profile.save()

        return redirect(
            'view_profile'
        )

    else:

        form = StudentProfileForm()

    return render(
        request,
        'profile/create_profile.html',
        {'form': form}
    )
```

Step 6: Create Profile Display View

Add:

```
@login_required
def view_profile(request):

    profile = StudentProfile.objects.get(
        user=request.user
    )

    return render(
        request,
        'profile/view_profile.html',
        {'profile': profile}
    )
```

Step 7: Create URLs

Open:

```
placements/urls.py
```

Add:

```
path(
    'profile/create/',
    create_profile,
    name='create_profile'
),

path(
    'profile/',
    view_profile,
    name='view_profile'
),
```

Remember to import the views.

Step 8: Create Create Profile Template

Create:

```
templates/profile/create_profile.html
```

Add:

```
{% extends 'base.html' %}

{% block content %}

<h2>Create Profile</h2>

<form method="POST">

    {% csrf_token %}

    {{ form.as_p }}

    <button
        class="btn btn-primary"
    >
        Save Profile
    </button>
```

```
</form>

{% endblock %}
```

Step 9: Create View Profile Template

Create:

```
templates/profile/view_profile.html
```

Add:

```
{% extends 'base.html' %}

{% block content %}

<h2>My Profile</h2>

<hr>

<p>
<b>Name:</b>
{{ profile.user.username }}
</p>

<p>
<b>Phone:</b>
{{ profile.phone }}
</p>

<p>
<b>Location:</b>
{{ profile.location }}
</p>

<p>
<b>Qualification:</b>
{{ profile.qualification }}
</p>

<p>
<b>College:</b>
{{ profile.college }}
</p>
```

```
</p>

<p>
<b>Skills:</b>
{{ profile.skills }}
</p>

<p>
<b>Preferred Role:</b>
{{ profile.preferred_job_role }}
</p>

{% endblock %}
```

Step 10: Add Navigation Links

Update:

```
base.html
```

Add:

```
<li class="nav-item">
  <a
    class="nav-link"
    href="{% url 'create_profile' %}"
  >
    Create Profile
  </a>
</li>

<li class="nav-item">
  <a
    class="nav-link"
    href="{% url 'view_profile' %}"
  >
    My Profile
  </a>
</li>
```

Bonus Task: Profile Completion Percentage

Create a simple profile score.

Example:

Field	Marks
Phone	10
Education	10
Skills	20
GitHub	20
LinkedIn	20
Portfolio	20

Display:

Profile Completion: 80%

This can be implemented later if time permits.

Testing Checklist

Create Profile

- ☐ Profile saves successfully
- ☐ Linked to logged-in user

View Profile

- ☐ Displays profile details
- ☐ Accessible only after login

Admin

- ☐ Profile visible in Django Admin

Navigation

- ☐ Create Profile link working
- ☐ My Profile link working

Day 3 Deliverables

By the end of Day 3, the intern should demonstrate:

- ✓ Student Profile Model
 - ✓ Profile Form
 - ✓ Create Profile Page
 - ✓ View Profile Page
 - ✓ Profile Stored in Database
 - ✓ Profile Visible in Admin Panel
 - ✓ Navigation Links Added
-

End of Day 3 Expected Output

After login, a student should be able to:

1. Create a professional profile.
2. Save education and skills.
3. Add GitHub and LinkedIn links.
4. Specify preferred job role.
5. View profile details from the dashboard.

This profile will be used later for:

- Resume Management
- Candidate Search
- Job Applications
- Placement Tracking
- AI Resume Suggestions
