

Day 4 Notes – Resume Repository Module

Project: Asquare CareerBridge

Objective

The goal of Day 4 is to implement the Resume Repository System.

After completing their profile, students should be able to:

- Upload resumes
- Update resumes
- View uploaded resumes
- Download resumes

The Placement Team should be able to access resumes directly from the student profile.

Why Resume Repository?

Most institutes store resumes in:

- WhatsApp Groups
- Google Drive Folders
- Email Attachments

Problems:

- Difficult to search
- Difficult to organize
- Resumes get outdated

CareerBridge will maintain a centralized resume database.

Features to Build Today

Student Features

- Upload Resume
- Replace Resume
- View Resume Information

Placement Team Features (Future)

- Access Student Resumes
 - Download Student Resumes
 - Search Candidates
-

Understanding File Uploads in Django

Django stores uploaded files in a special folder called:

```
media/
```

Example:

```
media/resumes/john_resume.pdf
```

Step 1: Configure Media Files

Open:

```
careerbridge/settings.py
```

Add at the bottom:

```
MEDIA_URL = '/media/'  
  
MEDIA_ROOT = BASE_DIR / 'media'
```

Step 2: Configure URLs for Media

Open:

```
careerbridge/urls.py
```

Add:

```
from django.conf import settings
from django.conf.urls.static import static
```

At the bottom:

```
if settings.DEBUG:
    urlpatterns += static(
        settings.MEDIA_URL,
        document_root=settings.MEDIA_ROOT
    )
```

Step 3: Update Student Profile Model

Open:

```
placements/models.py
```

Add resume field:

```
resume = models.FileField(
    upload_to='resumes/',
    blank=True,
    null=True
)
```

Example model:

```
class StudentProfile(models.Model):

    user = models.OneToOneField(
        User,
        on_delete=models.CASCADE
    )

    phone = models.CharField(max_length=20)

    skills = models.TextField()
```

```
preferred_job_role = models.CharField(
    max_length=100
)

resume = models.FileField(
    upload_to='resumes/',
    blank=True,
    null=True
)
```

Step 4: Create Migration

Run:

```
python manage.py makemigrations
```

Then:

```
python manage.py migrate
```

Step 5: Update Profile Form

Open:

```
placements/forms.py
```

Ensure resume field is included.

Example:

```
class StudentProfileForm(forms.ModelForm):

    class Meta:
        model = StudentProfile
        exclude = ['user']
```

Since we use `exclude=[ 'user' ]`, resume will automatically appear.

Step 6: Update Create Profile View

Open:

```
placements/views.py
```

Update form handling:

```
form = StudentProfileForm(
    request.POST,
    request.FILES
)
```

Full section:

```
if request.method == 'POST':

    form = StudentProfileForm(
        request.POST,
        request.FILES
    )

    if form.is_valid():

        profile = form.save(
            commit=False
        )

        profile.user = request.user

        profile.save()

        return redirect(
            'view_profile'
        )
```

Step 7: Update Create Profile Template

Open:

```
create_profile.html
```

Modify form:

```
<form
  method="POST"
  enctype="multipart/form-data"
>
```

Important:

```
enctype="multipart/form-data"
```

Without this, file upload will not work.

Step 8: Display Resume Information

Open:

```
view_profile.html
```

Add:

```
{% if profile.resume %}

<p>
  <b>Resume:</b>

  <a href="{{ profile.resume.url }}">
    View Resume
  </a>
</p>

{% endif %}
```

Step 9: Create Resume Update Feature

Students should be able to replace old resumes.

Create:

```
@login_required
def edit_profile(request):

    profile = StudentProfile.objects.get(
        user=request.user
    )

    if request.method == 'POST':

        form = StudentProfileForm(
            request.POST,
            request.FILES,
            instance=profile
        )

        if form.is_valid():

            form.save()

            return redirect(
                'view_profile'
            )

    else:

        form = StudentProfileForm(
            instance=profile
        )

    return render(
        request,
        'profile/edit_profile.html',
        {'form': form}
    )
```

Step 10: Create Edit Profile URL

Open:

```
placements/urls.py
```

Add:

```
path(
    'profile/edit/',
    edit_profile,
    name='edit_profile'
),
```

Step 11: Create Edit Profile Template

Create:

```
templates/profile/edit_profile.html
```

Add:

```
{% extends 'base.html' %}

{% block content %}

<h2>Edit Profile</h2>

<form
    method="POST"
    enctype="multipart/form-data"
>

    {% csrf_token %}

    {{ form.as_p }}

    <button
        class="btn btn-success"
    >
```

```
        Update Profile
    </button>

</form>

{% endblock %}
```

Step 12: Add Resume Validation

Allow only PDF files.

Open:

```
placements/models.py
```

Add validator:

```
from django.core.validators import FileExtensionValidator
```

Update:

```
resume = models.FileField(
    upload_to='resumes/',
    validators=[
        FileExtensionValidator(
            allowed_extensions=['pdf']
        )
    ]
)
```

This prevents:

```
jpg
png
exe
zip
```

uploads.

Bonus Feature: Resume Upload Date

Add:

```
uploaded_at = models.DateTimeField(  
    auto_now_add=True  
)
```

Benefits:

- Know latest resume
 - Resume tracking
-

Testing Checklist

Upload

- ☐ PDF uploads successfully
- ☐ File stored in media folder

View

- ☐ Resume link visible
- ☐ Resume opens correctly

Edit

- ☐ Resume can be replaced
- ☐ Existing data preserved

Validation

- ☐ PDF allowed
 - ☐ Other file types blocked
-

Day 4 Deliverables

By the end of Day 4, the intern should demonstrate:

- ☒ Resume Upload
- ☒ Resume Storage

- ✓ Resume View Link
 - ✓ Profile Edit Feature
 - ✓ Resume Update Feature
 - ✓ PDF Validation
 - ✓ Media Configuration
-

End of Day 4 Expected Output

A student should be able to:

1. Login to CareerBridge.
2. Create a profile.
3. Upload a PDF resume.
4. View uploaded resume.
5. Replace old resume with a new version.

The platform now contains:

- Authentication System
- Student Profile System
- Resume Repository System

This forms the foundation for Day 5, where students will start browsing and applying for job opportunities.
